

Supplied institutional crest reference · verify master/vector artwork and rights before production

SAMC BRAND GUIDELINES

Institutional Crest Edition · v2.2 · EN + বাংলা

Built from the actual SAMC crest supplied by the institution

MASTER IDENTITY

The supplied SAMC crest—not a newly invented symbol—is the primary institutional identity reference.

00 / IDENTITY

The crest is the institution

The supplied crest combines the institutional name, medical emblem, red/blue field, stars, ESTD: 2021 and SAMC ribbon into one formal identity.

Layer	Approved expression	Rule
Master identity	SAMC crest	Primary institutional mark.
Formal name	South Apollo Medical College & Hospital (as supplied)	Verify the current registered college/hospital wording before legal or regulatory use.
Care division	SAMC / Medical Care Services	Descriptor, not a separate logo.
Education division	SAMC / Medical Professional Education	Descriptor, not a separate logo.
Research	SAMC / Research & Innovation	Descriptor, not a separate logo.

NAME CONTROL

The supplied crest reads “SOUTH APOLLO MEDICAL COLLEGE & HOSPITAL.” Some earlier concepts used a different name. Until the legal wording is formally confirmed, the supplied crest and SAMC short form should be treated as the visual reference.

01 / CREST ANATOMY

Preserve the artwork

The crest is a seal. Its individual elements may be explained, but they must not be rearranged, redrawn or independently stylized.

Element	Role	Rule
Outer ring	Institutional name	Do not re-typeset.
Caduceus	Medical identity	Preserve as supplied.
Red field	Clinical/visual emphasis	Part of the crest.
Blue field	Institutional/academic emphasis	Part of the crest.
Cyan + yellow lines	Internal graphic motif	Do not extract casually.
Stars	Formal emblem	Do not move or duplicate.
ESTD: 2021	Origin marker	Do not alter.
SAMC ribbon	Short name	Do not replace lettering.

MASTER ARTWORK

Use the approved master vector/raster file. Never rebuild the crest manually.

02 / LOGO USE

Clear, formal and consistent

- Use the full-color crest on white or very light backgrounds whenever possible.
- Maintain clear space equal to at least 10% of the crest's overall width on every side, measured from the outermost visible point. Increase space whenever nearby text or edges compete with it.
- Create separate approved print, digital, monochrome and reverse variants from the master asset.
- Provisional minimum full-crest sizes pending physical/user testing: 30mm print, 120px digital, 50mm embroidery. Below these, use only an authorized simplified emblem—not a cropped crest. Signage requires site/viewing-distance calculations.
- Never stretch, compress, rotate, shadow, bevel, outline or recolor the crest.
- Never place the full crest over a busy photograph where its lettering becomes unreadable.
- Do not use the crest as a repeating decorative pattern.

Crest-derived institutional palette

The crest is multicolor, but external brand applications should remain disciplined. One site or campaign should use one controlled working set.

Role	HEX	Primary use
Institutional Blue	#0076D7	Primary actions, links, headings, fields.
Deep Blue	#005AA8	Formal text accents and strong surfaces.
Clinical Red	#F20D16	Critical/urgent information and restrained accents.
Crest Cyan	#21B7EA	Secondary highlights.
Crest Yellow	#FFD21A	Small highlights only.
Black	#111111	Formal text.
White	#FFFFFF	Primary negative space.
Soft Blue	#F2F8FD	Quiet panels and UI surfaces.

ACCESSIBILITY / WCAG 2.2 AA target: 4.5:1 normal text; 3:1 large text and meaningful UI components. White on #0076D7 = 4.59:1; white on #005AA8 = 6.94:1. White on #F20D16 = 4.33:1 (not normal-size text); #21B7EA and #FFD21A require dark text or non-text accent use. #64748B on white = 4.76:1. Do not use color alone for clinical or status meaning.

ONE-SITE RULE

Keep the crest itself intact. Outside the crest, do not scatter all crest colors throughout the interface. Select a controlled working set for the site/campaign and keep it consistent.

Academic authority + modern usability

The crest already carries a traditional academic character. Supporting typography should therefore be clean and restrained.

Context	English	Bangla	Rule
Primary web/UI	Aptos	Hind Siliguri	Main institutional system.
Formal print	Approved serif where needed	Approved Bengali serif where needed	Ceremonial exception only.
Clinical/data	Aptos	Hind Siliguri	Clarity first.

MAXIMUM TYPE RULE

For the main digital system, maximum two everyday type families: one English and one Bangla. Do not add fonts simply for decoration.

05 / BILINGUAL

English + বাংলা are equal states

Every public-facing digital experience should be designed as two complete language states.

- Persistent EN / বাংলা switch.
- Every core English page has a corresponding Bangla page and vice versa.
- Recommended /en/... and /bn/... structure.
- Navigation, buttons, forms, validation, errors, confirmations and help are bilingual.
- Patient-facing information uses plain, natural Bangla.
- Accepted medical English may appear in parentheses when clinically useful.
- Bangla is LTR and receives independent responsive QA.
- Literal machine translation is not a final publishing standard.
- Missing critical translation is a release blocker.

QA area	English	বাংলা
Navigation	No truncation	No clipping / overflow
Buttons	Correct width	Correct width
Headlines	Expected hierarchy	Expected hierarchy
Forms	Aligned labels	Aligned labels
Mobile	No overflow	No overflow
Accessibility	Contrast / focus	Contrast / rendering

06 / INSTITUTIONAL ARCHITECTURE

One SAMC · two core divisions

The visual identity should mirror the institution's operating model: medical care and medical professional education under one master SAMC identity.

Master	Division	Descriptor language
SAMC	Medical Care Services	Care · Safety · Service
SAMC	Medical Professional Education	Knowledge · Skills · Excellence
SAMC	Research & Innovation	Evidence · Discovery · Impact

ARCHITECTURE RULE

Do not create separate crests for divisions. Use one SAMC master identity plus a consistent descriptor system.

07 / PHOTOGRAPHY

HD imagery is a core brand asset

The institution should look real, credible and human—not like a generic healthcare startup.

Context	Preferred	Avoid
Medical care	Consultation, nursing, diagnostics, procedures, patient journey	Artificial stock-photo clinical scenes
Education	Teaching rounds, simulation, labs, skills training	Generic classroom stock
Research	Laboratories, imaging, researchers, data, technology	Science-fiction imagery presented as reality
Community	Families, outreach, public health, local people	Exploitative poverty imagery
Campus	Architecture, learning spaces, gardens, wayfinding	Unverified renders shown as current reality

HD PLACEHOLDER STANDARD

Reserve large HD-photo areas on major pages and campaigns. Define crop ratio, focal point, caption and alt-text zones before final photography is inserted.

08 / 77 CREATIVE LIBRARY

One master identity, 77 production surfaces

Every creative type inherits the actual crest, institutional palette, bilingual standard and one-site/one-set discipline.

#	Creative type	Language
01	Master logo lockup	EN + BN
02	Horizontal logo lockup	EN + BN
03	Vertical / stacked lockup	EN + BN

09 / DIGITAL

Website behavior

The website may be contemporary and spacious, but the actual SAMC crest remains the anchor.

Component	Standard
Header	Crest + SAMC identity + EN / বাংলা.
Hero	Large HD photo or institutional visual; concise headline; one primary action.
Navigation	Simple, high contrast, bilingual.
Cards	Consistent spacing and one controlled palette.
Icons	Health Icons outline only; 48-unit source grid; currentColor; English/Bangla labels; CC0 source register; no mixed icon families.
Footer	Institutional identity, contact, legal and language utilities.
Mobile	Independent EN and BN responsive states.

10 / GOVERNANCE

Protect the master identity

A crest-led institution needs one authoritative source of truth.

Area	Owner	Control
Master crest	Institutional brand authority	Single approved master file.
Legal name	Institutional authority	Legal wording overrides design preference.
Color	Brand owner	Version-controlled values.
Bangla terminology	Content/language owner	Approved terminology list.
Clinical communication	Clinical + communications authority	Accuracy before aesthetics.
Academic communication	Academic + communications authority	Accuracy + consistency.
Digital UI	Digital/product owner	EN/BN parity + accessibility.
Photography	Communications + privacy owner	Rights, consent, dignity.

Nothing ships until it passes

- Correct approved SAMC crest used.
- Correct institutional/legal name used where required.
- No alteration of crest artwork.
- One controlled color set used outside the crest.
- English and Bangla content complete.
- Bangla rendering tested on target devices.
- HD photography approved, licensed and appropriately cropped.
- Patient privacy and dignity protected.
- Accessibility and contrast checked.
- Responsive EN/BN states tested.
- Source files and exports archived.
- Version and approval status recorded.

FINAL RULE

The crest is the identity. Color, typography, photography, UI, signage and campaigns exist to make that identity clearer, more credible and more useful.

APPENDIX

Master asset library

Recommended production structure for the final brand handoff.

Folder	Contents
01_MASTER_CREST	Vector, PNG, monochrome, reverse and minimum-size masters.
02_IDENTITY_RULES	Clear space, sizing and incorrect-use standards.
03_COLOR	Digital and print color specifications.
04_TYPE	English/Bangla fonts, hierarchy and licensing references.
05_BILINGUAL	Approved EN/BN terminology and QA.
06_PHOTOGRAPHY	HD library, rights, consent, crops and alt text.
07_77_CREATIVE	Editable masters for all 77 creative types.
08_DIGITAL	UI components, responsive states and accessibility.
09_PRINT	Print-ready artwork and vendor specifications.
10_ARCHIVE	Superseded versions and approvals.

PRODUCTION NOTES / v2.2 reviewed copy

- The supplied crest reads SOUTH APOLLO MEDICAL COLLEGE & HOSPITAL. Earlier South Asian references in the concept workspace are superseded for this crest edition; legal-name and rights verification remain required.
- The 77-item creative library is a scope checklist, not a claim that all 77 finished assets exist in the supplied package.
- Minimum sizes, contrast, icon geometry and repeated table headers are specified in this reviewed copy. Physical print, embroidery, signage, screen-reader and EN/BN user testing remain release gates.
- Publication requires a named approver, approval date, source master, rights/consent records, font licenses and a change log. This reviewed document is not itself institutional approval.

This document is a design and identity standard. It does not itself establish trademark ownership, legal registration, clinical policy or regulatory approval.
